

SERVICE BRIEF · 08

# Microsoft Purview Accelerator.

Protect sensitive data across your entire Microsoft 365 environment.

## THE PROBLEM & THE APPROACH

**Sensitive data moves freely across your organisation through email, SharePoint, Teams, and OneDrive often without appropriate protection or visibility. Manually managing data security doesn't scale, and breaches or compliance failures carry significant cost.**

**CNNECT's Microsoft Purview Accelerator** provides the framework to automatically classify, label, and protect sensitive data based on its content and context. Our deployment service takes you from initial assessment through to full implementation embedding protection into daily workflows.

## Key challenges addressed

SIX DATA-RISK AREAS

- |                                                                                                                           |                                                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>01 Lack of data visibility</b> No clear understanding of where sensitive data resides or how it's being used           | <b>04 Compliance requirements</b> Inability to demonstrate consistent handling of regulated data                   |
| <b>02 Manual protection processes</b> Relying on users to correctly identify and protect sensitive data                   | <b>05 Inconsistent classification</b> Different teams applying different standards to information                  |
| <b>03 Data leakage risk</b> Confidential data leaving the organisation via email, external sharing, or removable devices. | <b>06 Reactive incident response</b> Discovering data breaches after they've occurred rather than preventing them. |

SERVICE OVERVIEW

# A four-phase structured deployment.

Our Purview deployment follows a structured four-phase approach, taking you from initial discovery through operational deployment with user adoption and ongoing management.

Tiered to organisational scale Standard for straightforward classification, Enterprise for complex multi-BU landscapes both delivered against the same proven phase model.

| METHOD | 01 Discovery & Planning | 02 Configuration & Testing | 03 Deployment & Enablement | 04 Optimisation & Handover |
|--------|-------------------------|----------------------------|----------------------------|----------------------------|
|--------|-------------------------|----------------------------|----------------------------|----------------------------|

## TIER 01 • STANDARD

### Standard Deployment

For organisations up to 250 users with straightforward classification requirements typically 3–5 sensitivity labels, standard DLP policies.

- Up to 250 users
- 3 – 5 sensitivity labels
- Standard DLP policies
- Foundational governance

## TIER 02 • ENTERPRISE

### Enterprise Deployment

For organisations with complex data landscapes, multiple business units requiring different policies, advanced auto-labelling, or third-party integrations.

- Complex data landscapes
- Per-BU policy sets
- Advanced auto-labelling
- Third-party integrations

## TYPICAL TIMELINE

**8 – 12 weeks**

Kick-off to full deployment.

## METHODOLOGY

**4-phase Accelerator**

Discovery → Configure → Deploy → Optimise.

## WHAT'S INCLUDED IN BOTH

01 Discovery 02 Policy config & test 03 Phased deployment 04 Documentation 05 30-day support

## FIVE DELIVERABLES

## NEXT STEPS

**Book a 30-minute scoping call to confirm scope, licensing, and timeline.**
